Lean-Agile Product Delivery/Management

Desired employment / Occupational field

Personal skills and competences

Social skills and competences
(incorporating coworker feedback)

- Strong communicator and trusted advisor to both team members and stakeholders.
- Able to facilitate solution-oriented dialogue, and bring clarity in both complex and high-pressure situations.
- Skilled at fostering psychological safety and team motivation, creating high-trust collaborative environments where colleagues can learn, ask questions, and grow.
- Skilled at coaching and mentoring both junior and senior professionals in agile delivery, product thinking, and consulting skills.
- Extensive cross-cultural collaboration experience, fluent in Swedish, English, and Japanese.

Organisational skills and competences
(incorporating coworker feedback)

- 12+ years of consulting experience leading everything from shorter engagements to multi-year digital product deliveries in multiple industries, including finance, insurance, and education.
- Skilled at managing client expectations, negotiating the balance between scope, staffing and delivery timeline, often in complex regulatory environments.
- Contributing to organisational growth through proposal ownership, thought leadership, and mentoring colleagues in consulting, agile practices, and client engagement.
- Contributing to organisational initiatives including definition of company values, facilitating learning communities, and career development frameworks.

Technical skills and competences

- Strong foundation in computer science (algorithms, concurrent programming, AI, networking, visualisation).
- Full-stack engineering across frontend, backend, and mobile (TypeScript, Node.js, React, Java, Python, WebGL, Android, and more).
- Experienced in API design, integration, and delivery in regulated environments such as finance and insurance.
- Skilled in agile product and project delivery techniques (Scrum, Kanban, backlog management, user story mapping, product roadmapping).
- Experience with AI tooling for prototyping, and interacting with codebases (Claude Code, Claude Design, Cursor, etc)

Artistic skills and competences

- Strong appreciation for design aesthetics and user experience, supporting effective collaboration with designers and other product contributors.
- Experience applying 2D/3D visualisation techniques in product development (e.g., interior lighting design tools, WebGL visualisation).
- Practical experience with digital design tools (Figma, Photoshop, Inkscape, Blender, etc).

Driving licence

I hold a Swedish (EU) and a Japanese driver's licence for automobiles. A Japanese driver's licence for motorcycles, and a Swedish licence for snowmobiles and ATVs.

Work experience

Dates	2025-12-04 - present day
Occupation or position held	Senior Client Delivery Lead (Project Delivery Lead, Business Analysis)
Main activities and responsibilities	Managing client relationships and communication during migrations from legacy systems to the Kraken platform. Coordinating communication and delivery across multiple internal product teams to enable delivery of the necessary platform functionality to support clients migrations. Collaborating with clients to map out requirements for Japanese market adaptations and client-specific operational needs, and translating these into specifications for engineering teams. Using AI tooling to verify potential gaps in functionality between the Kraken codebase and client needs.
Name and address of employer	Kraken Technologies Japan GK, Tokyo-to Minato-ku Roppongi 1-6-1 Izumi Garden Tower, Japan
Type of business or sector	Cloud-based billing and electrical grid management software for utility companies.
Dates	2017-08-21 - 2025-11-28
Occupation or position held	Senior Consultant (Project Delivery Lead, Software Engineering and Agile Process Facilitation)
Main activities and responsibilities	Consulting clients from various industries on the design, development and delivery of high quality digital solutions with user and business value at the core. Taking on both engineering and facilitation roles while working as a member of cross functional teams. Fostering and facilitating agile and lean ways of working that enable more successful outcomes for both our teams and our clients. Managing client expectations and priorities, and facilitating communication with our teams. In product triads, acting as the voice for engineering or supporting clients in voicing business needs. Guided the shift of delivery processes over to remote work, maintaining tight-knit team collaboration even for teams spread over multiple continents.
Name and address of employer	Reaktor Japan KK, Tokyo-to Shibuya-ku Ebisu 3-28-2 Sreed EBISU 2 4F, Japan
Type of business or sector	Consulting services for design and development of digital services and solutions.
Dates	2013-02-25 - 2017-07-31
Occupation or position held	Senior Consultant (Business Analysis and Software Development)
Main activities and responsibilities	Worked on-site as a consultant at the Japan Securities Clearing Corporation (JSCC), a subsidiary of the Tokyo Stock Exchange, analyzing business requirements and designing flexible, maintainable technical solutions. Designed APIs used by JSCC's clients, including all major domestic and international banks active in Japan. Played a key role in guiding multicultural, multi-vendor teams, helping transition the project from a waterfall approach to agile development practices. Coached several teams over multiple years, enabling more effective collaboration and successful deliveries.
Name and address of employer	Aurora Solutions, Chuo-ku, Tokyo, Japan
Type of business or sector	Technical consulting in quantitative finance, risk and regulatory requirements.

Education and training

Dates	2001 - 2010
Principal subjects/skills covered	Studies towards a Master's degree in Computer Science and Engineering. Covering such fields as mathematics, programming and algorithms, software engineering, electrical and digital engineering, and physics as well as theoretical understanding in such fields as computer graphics and visualization, artificial intelligence, concurrent and parallel programming, networking and databases. Also control theory and signal analysis. I also undertook an internship which formed the basis for my master's thesis on "procedural generation of road networks using L-systems".
Name and type of organisation providing education and training	Linköping University
Dates	2003 - 2004
Principal subjects/skills covered	Special one-year programme to develop skills in the Japanese language and also a basic understanding of Japanese history, economy and business culture.
Name and type of organisation providing education and training	Linköping University

Additional information

Personal interests

I have a strong interest in sports and physical activity, including running, cycling, calisthenics, and winter sports such as ice-skating and skiing. I enjoy spending time in the mountains, snowboarding in the backcountry during winter, and hiking once the snow has cleared. I have also practiced Japanese martial arts such as Kendō and Jūdō, as well as modern disciplines like kickboxing.

Beyond sports, I am passionate about travel, meeting new people, and broadening my view of the world through new experiences. I follow developments in technology and enjoy keeping up with the latest innovations and gadgets. I also maintain a keen interest in politics and social issues, particularly those related to climate change.

Other experience

During my year of service with the Swedish Armed Forces Arctic Ranger Battalion, I first experienced the value of small, high-performing, and empowered teams. An experience and approach that continues to influence how I work today.
